

ABSTRACT OF THE DISCLOSURE

2
3 A window assembly for garage doors having an opening with
4 cooperative dimensions to receive a transparent panel with a reduced
5 surface on one side and a peripheral flange making the outer surface larger
6 than the internal surface. The underside of the peripheral flange member
7 comes in abutting contact with the panel's external surface to which it is
8 glued. An external frame member is mounted over the peripheral edge of
9 the external side of the transparent panel. An internal frame member is
10 mounted over the peripheral edge of internal surface. Fastening members
11 are used to keep the transparent panel member in place.
